EXPERIENCE

Welyne - Collab with AI SynapsePulse Inc. (USA)

Oct. 2025 - Jan. 2026

Web development and AI Intern

Tunis, Tunisia

- Conducted a research about the NFL systems , the sensors and data to use.
- Designed a platform to track NFL Players Metrics (HR, RR intervals , speed and accuracy) to predict their fatigue.
- Built a ML model to predict a one of the four levels of fatigue.
- Provided a quicker way to track players' fatigue to guarantee the best performance of a NFL team.

Get Wireless

June 2025 – July 2025

Image Enhance Intern

Tunis, Tunisia

- Developed a Python script to enhance radiology image quality through improving quality techniques.
- Served a tool to help doctors track cancer by improving image quality.

Freelancing

2024

Online Freelancer

Remote

- Designed visual concepts for different clients based on their requirements.

Tunisie Telecom

2024

Summer Job

Monsatir ,Tunisia

- Assisted in technical and operational tasks within the telecom environment.
- Supported internal teams in handling daily service-related and system maintenance activities.

PROJECTS

Leak Detection System

Feb. 2026

- Developed an embedded system for leak detection using environmental sensors.
- Integrated sensor data with AI models to detect and classify leak events.
- Implemented real-time monitoring and alert mechanisms for system response.

NFL Fatigue Tracking System

- Developed a machine learning model to track and predict NFL players' fatigue levels.
- Processed physiological and performance data to assess player condition in real time.
- Implemented a platform to visualize fatigue levels and generate alert notifications.

Machine Health Monitoring System

Oct. 2025 – Jan. 2026

- Collected and analyzed sensor datasheets to support system setup and integration.
- Developed a C++ program to simulate sensors and read real-time values.
- Integrated sensor data with AI models to predict machine health levels.

Study Hub

Feb. 2026 – Mar. 2026

- Developed a productivity tracking system based on the Pomodoro technique.
- Collected and analyzed user activity data to monitor focus and work sessions.
- Implemented AI models to predict user productivity patterns and optimize work cycles.

Coin Recognition Model

- Developed a computer vision model to recognize and classify coins from images.
- Trained and evaluated the model on labeled image data for accurate classification.
- Achieved reliable performance without deploying a user interface or platform.

Quality Control System

Oct. 2024 – Apr. 2025

- Developed a computer vision pipeline for industrial quality control and anomaly detection.
- Built a Streamlit dashboard for real-time anomaly monitoring and visualization.
- Achieved 93% accuracy for anomaly detection on the evaluated dataset.

Barber Queue Optimization System

- Developed a multi-kiosk platform to track and manage barber shop queues in real time.
- Optimized customer flow and waiting times through queue monitoring and allocation strategies.
- Designed a system to improve service efficiency and reduce congestion in barber shops.

Extracurricular Activities

Competitive Programming Contests Staff

- Contributed to initiatives that promoted competitive programming culture and improved the quality of contests and learning activities in Tunisia.

Leader, Tunisian Scouts

- Developed leadership, team-building, and event coordination skills by leading scout activities and supporting group organization.

National Robotics Weekend, Organizing Committee Member

- Served as Administrative Affairs Manager, coordinating participant communication and administrative processes to ensure smooth event operations.

Robotics Workshops Instructor

- Delivered robotics workshops for the Tunisian Scouts during national events, including JOTA-JOTI and National Scout Day.

Instructor, Moataz Mdimagh Robotics Club

- Taught children foundational robotics concepts through simple, hands-on projects and accessible teaching methods.

General Secretary, ACM Club

- Managed meetings, activities, and internal communication to support members' programming growth and club engagement.

EDUCATION

National Institute of Applied Sciences and Technology (INSAT)

Sep. 2022 – Present

Industrial IT and Automation Engineering Degree

INSAT, Tunis

- **Coursework:** Embedded Systems, Automation, Electronics, Robotics.

SKILLS

Programming : Python, C/C++, Java, JavaScript/TypeScript, SQL

Artificial Intelligence : Machine Learning, Deep Learning, Computer Vision, Predictive Modeling, Model Evaluation

Data Analysis : Data Cleaning, Data Preprocessing, Data Visualization, Statistical Analysis, Feature Engineering

Tools : GitHub, Jupyter Notebook, Streamlit, VS Code
