

LETTER OF RECOMMENDATION

To Whom it may concern,

Tunis, Sept. 2026

I am pleased to write this letter in strong support of **Mr. Rayen Mrad** and his application to join your company for his last year internship. Having taught him during different stages of his academic education, I have had the opportunity to follow his progress and to appreciate his academic abilities, technical competence, motivation, and personal commitment. I am therefore glad to recommend him for this challenging and rewarding research opportunity.

As a Professor at the **National Institute of Applied Sciences and Technology of Tunis (INSAT)**, I had the opportunity to teach Mr. Mrad first during his preparatory studies in **Mathematics, Physics, and Computer Science**, and subsequently during his engineering education in **Industrial Informatics and Automated Systems**. As part of his engineering curriculum, I taught him subjects related to **electrical engineering, power electronics, and electrical power systems**. This provided me with the opportunity to evaluate his technical knowledge, his analytical reasoning, and his ability to deal with engineering problems in a rigorous and organized manner.

Throughout his academic career, Mr. Mrad has distinguished himself through his seriousness, perseverance, and commitment to his studies. He has demonstrated a solid understanding of fundamental theoretical concepts and an ability to translate this knowledge into practical applications. When confronted with a technical problem, he adopts a structured approach, carefully examining the different aspects of the problem before developing a suitable solution. He is also receptive to new ideas and concepts and demonstrates a good capacity to learn and adapt. His academic performance places him among the **top 10% of a highly competitive cohort of approximately 100 students**.

In addition to his academic strengths, Mr. Mrad has developed qualities that are particularly relevant to research and collaborative work. He is responsible, self-motivated, and able to organize his work independently. At the same time, he is comfortable working with others and contributing constructively to group activities. His participation in laboratory work, as well as in **INSAT student clubs and scientific and social activities**, has contributed to the development of his communication, teamwork, and interpersonal skills. His involvement in the academic community also reflects his initiative and his willingness to engage in activities beyond the strictly academic requirements of his studies.

I believe that this internship in your company would offer Mr. Mrad an excellent opportunity to expand his research experience and further develop his scientific and technical abilities. His engineering background, analytical skills, adaptability, and motivation provide him with the necessary foundations to benefit from a research-oriented international experience. I expect him to approach research assignments with seriousness and curiosity, integrate effectively into his host research group, and contribute positively to the work undertaken by the team.

For these reasons, I am pleased to offer **Mr. Rayen Mrad my strongest and wholehearted recommendation** for this Internship. I am confident that this experience would represent an important opportunity for him to broaden his scientific perspective, strengthen his research capabilities, and further prepare himself for future academic and professional challenges.

Please do not hesitate to contact me should you require any additional information regarding Mr. Mrad's academic background, abilities, or qualifications.

Sincerely,

Pr. Amine LAHYANI Associate Professor,
National Institute of Applied Sciences and Technologies of Tunis
