LETTER OF RECOMMENDATION

To Whom It May Concern,

I am pleased to write this letter in support of **Rayen Mrad**, a fifth-year student in Industrial IT and Automation, whom I have taught in the field of Microprocessors.

Throughout his academic work, **Rayen** has demonstrated a strong interest in understanding how computing systems operate at a fundamental level. The study of microprocessors requires precision, logical reasoning, and a clear understanding of the interaction between hardware and software. In this context, Rayen has shown a serious and methodical approach to technical problems, as well as a willingness to explore the underlying principles behind the systems he works with.

His academic background in Industrial IT and Automation has provided him with a broad technical perspective, combining automation, programming, electronics, embedded systems, and industrial computing. I consider this multidisciplinary foundation particularly valuable for his current interest in Machine Learning, where the ability to understand both computational processes and their practical implementation can be an important asset.

One of **Rayen's** notable qualities is his willingness to extend his learning beyond the boundaries of individual courses. His interest in Artificial Intelligence and Machine Learning reflects a clear desire to develop expertise in a rapidly evolving technical field.

His studies in microprocessors have also contributed to developing qualities that are essential in engineering: attention to detail, structured reasoning, persistence when facing technical difficulties, and the ability to connect theoretical concepts with practical systems. These qualities, together with his engineering education, provide him with a solid foundation for pursuing further development in Machine Learning.

Based on my experience with Rayen as a student, I believe he possesses the motivation, technical curiosity, and capacity for continuous learning required to succeed in demanding academic or professional environments. I therefore support his applications for Machine Learning internships, research programs, graduate studies, and other opportunities related to Artificial Intelligence and Machine Learning.

I am confident that **Rayen** will approach future challenges with the same seriousness and determination that he has demonstrated throughout his academic training.

Sincerely,

Signature

Bouthaina Ben Abdelaziz
